Regarding the article Selections of donors depending on agronomic traits, seed yield components, and fatty acid profile for genetic improvement of *Carthamus* using stepwise multiple regression. *OCL* 2020, 27, 66 (2020), published December 11th, 2020: the missing Table 2 is inserted below.

Table 2. Mean performance of agronomic traits and oil percent of 18 genotypes of safflower (combined analysis of 2016/2017 and 2017/2018 seasons).

Genotype	PH	NFB	NSB	NTHB	SYP	YFB	YSB	YSHB	Seed index	OIL%

In each column, means with the different superscript letter were significantly different using the Bonferroni correction test.

Plant height (PH), number of first branches (NFB), number of secondary branches (NSB), number of third branches (NTHB), seed yield/plant (SYP), yield of first branches (YFB), yield of secondary branches (YSB), yield of third branches (YTHB), seed index (1000 seeds weight) and oil content.
